

To whom it may concern,

My name is Forrest Cameranesi, and I am interested in joining your team as a web developer.

I bring extensive experience in web development and related fields, with recent work delivering 30–40 client projects at Twisted Rope from 2021 through 2024. These ranged from simple static sites to complex Next.js and React applications, as well as CMS-driven platforms such as WordPress, AEM, and Sitecore. I'm equally comfortable working with legacy systems and modern frameworks — whether maintaining traditional PHP/jQuery codebases or building cutting-edge React/TypeScript applications. My background also includes design leadership, Ruby on Rails development, and technical art direction, giving me a broad base of experience to draw from.

I am a fast learner who adapts quickly to new technologies, and I thrive in both independent and collaborative roles. I stay current with modern development practices, including AI-assisted development workflows using tools like Claude, Copilot, and Windsurf. These tools have accelerated my ability to learn new frameworks, debug complex issues, and deliver solutions efficiently — often achieving over 3x productivity gains compared to traditional workflows. For example, I recently developed a Python automation script that leverages AI and APIs to transform hours of manual photo gallery updates into minutes of automated processing. I've also been gradually modernizing my personal portfolio through projects like converting to modular TypeScript, building a custom PHP framework, and upgrading from XAMPP/FTP workflows to a professional npm-based development pipeline with automated testing, staging environments, and git-based deployment.

I especially value contributing to a team's success, whether by supporting others, leading projects, or improving processes. I have extensive experience working in remote environments, balancing independent focus with clear, consistent online communication. One of the things that most appeals to me about opportunities like this one is precisely that they are remote, as I know from experience that I do my best work in a distributed setting.

I am looking for a long-term role where I can apply the skills I already bring while continuing to learn and grow, and where I can help others do the same.

You can find my portfolio and resume online at [geekofalltrades.org](https://geekofalltrades.org). Thank you very much for your consideration, and I look forward to the opportunity to contribute to your team.

Sincerely,

Forrest Cameranesi
